GO FAST BITS

0002a

Stand by for G-FORCE

The newest addition to the TMS range

NEW

EASIER TO FIT | FASTER TO TUNE | MORE POWERFUL

Electronic boost control with the **GFB TMS** touch.

High tech is not about extra dials and buttons, its about performance without the hassle including easier fitment, faster tuning and setup and a more functional user interface (that's computer speak for the bit you use to control it). The full spec will be out 2010 but for the moment, just think of;

Controls boost pressures up to 50psi (3.5 bar) - class leading performance

Open or closed loop operation – closed loop logic helps prevent boost variations that can occur in different gears, RPM ranges and atmospheric conditions

6 boost memories, all individually programmable – you can program a different boost pressure and rise rate for each gear, and select on-the-fly

Scramble boost with auxiliary remote switching – program a timed boost increase for that extra edge when needed

Spike-stop feature eliminates boost spiking – helps tame boost spiking on troublesome turbo-charger systems

Real-time boost gauge, displays in bar, psi or kPa – choose the display units to suit your preference

Over-boost warning – user adjustable warning to indicate if the boost pressure is too high
